## ◆ Understanding the Meaning of Female Foeticide

Female foeticide refers to the intentional termination of a female fetus, usually after determining the sex through illegal prenatal testing. Despite being banned in many countries, including India, it remains widespread due to weak enforcement and societal norms that value boys over girls. It is a deep-rooted problem that needs to be tackled with awareness and legal action.

## ◆ Cultural Bias and Gender Preference

Cultural traditions in some regions assign greater value to sons, who are seen as financial supporters and family name bearers. Daughters, on the other hand, are wrongly perceived as burdens due to dowry systems and limited inheritance rights. This gender preference is the key reason behind the continuing practice of female foeticide.

## ◆ The Role of Technology in Female Foeticide

Technologies such as ultrasound scans and other prenatal sex determination methods have made it easier to know the sex of the fetus early in pregnancy. Although such uses are banned in many countries, illegal clinics continue to operate, providing these services to families who seek male children.

## ◆ Psychological and Social Impact on Women

Female foeticide not only denies girls the right to life but also affects the mental health of mothers forced to undergo repeated abortions. Women often face emotional trauma and family pressure, leading to long-term psychological distress and low self-worth.

## ◆ Alarming Gender Ratio and Its Effects

One of the major consequences of female foeticide is a skewed gender ratio. Societies with more males than females experience increased violence, trafficking, forced marriages, and societal imbalance. This shortage of women contributes to serious long-term demographic and social challenges.

## ◆ Legal Provisions Against Female Foeticide

Laws such as the Pre-Conception and Pre-Natal Diagnostic Techniques (PCPNDT) Act in India aim to prevent sex determination and punish offenders. However, better implementation, stricter monitoring, and public cooperation are needed to make these laws effective.

## ◆ Educating Society and Empowering Women

programs, media campaigns, and education systems must focus on changing mindsets and promoting gender equality. Encouraging girls' education, ensuring their rights, and offering economic opportunities to women can help reduce the desire for male children.

## ◆ Community Involvement in Ending the Practice

Religious leaders, teachers, social workers, and youth must work together to build respect for girls and challenge harmful traditions. Community-driven programs that celebrate the birth of girls can bring gradual and lasting change.
